FYI -- Dawn is working through the 3rd (and I think last) group of the initial Dimock samples.

Subject: Week 3 Sampling - Dimock

Hi, Kelley. I reviewed the Validated Summary Reports for the 3rd round of homewell samples in Dimock. My preliminary findings are provided below; exceedances of triggers are highlighted in red. I will begin working on the draft memos for each homewell, and hope to provide these to you by COB today. Any questions, please give me a call.

The following locations had no exceedances of triggers: HW21, HW23, HW36, HW38, HW43, HW44, HW45, HW48, HW49, HW51, and HW54. Please note that HW47 had consistently elevated levels of arsenic (up to 91.1 ug/L at the tap); chronic exposure to the observed concentrations of arsenic would pose an excess cancer risk of approximately 2E-03. From the notes provided for this residence, it appears that RO treatment is present at this home, although no samples were collected post-RO. If the analytical findings are indicative of exposure point concentrations for HW47, either treatment to remove arsenic or an alternate water supply should be considered to eliminate the risks associated with exposure.
